	Urgent	Not Urgent
Important	Do - (Your MVP) - Connect to API - Get meals available from the API - Display ingredients - Display macros	Schedule - (For V2.0+) - Check the ingredients of each of the meals - Make sure no hated foods are in the ingredients - Check the macros of the favorite foods and display them -
Not Important	Delegate - (Use a library) - Use java's HttpClient library to talk to the API - Use the HttpRequest library to request from the API - Use a library to parse JSON files received from the API - Like JsonNode	Delete - (Cut it) - Analyze macros and guess how much you ate based on how much you said you ate - Make the program an app - Suggest what to eat based on what you are feeling like eating today
